

The New Metro of Oporto: A variety of bridge projects

António REIS

Civil Engineer; Prof.
GRID, SA; IST
Lisbon, Portugal
antonio.reis@grid.pt

António Reis, born 1949, PhD, is Professor of Bridges and Structural Engineering at IST - Technical University of Lisbon and Technical Director of GRID, where he was responsible for the Metro of Oporto bridge projects.

Nuno LOPES

Civil Engineer
GRID, SA
Lisbon, Portugal
nuno.lopes@grid.pt

Nuno Lopes, born 1970, received his civil engineering degree from the Technical University of Lisbon. Since 1993, has been bridge designer at GRID, SA, namely for the Luiz I bridge project.

Daniel RIBEIRO

Civil Engineer
GRID, SA
Lisbon, Portugal
daniel.ribeiro@grid.pt

Daniel Ribeiro, born 1979, received his civil engineering degree from the Technical University of Lisbon and was involved in design and execution control of Luiz I bridge.

Summary

The construction of the new Metro of Oporto was one of the largest infrastructure projects developed in Portugal in the last decade. A light train system, with a large part at ground surface in addition to the underground network was shown to be the most technical and economically convenient option. A variety of bridge projects were developed for this new network, from new long viaducts, upgrade of an old masonry bridge and “last but not least” the railroad addition to the 19th century Luiz I bridge. The design of these bridges were developed by the authors in a turnkey design and built contract. The study of construction and erection schemes was included in the design, namely to insure stability during the retrofitting of Luiz I bridge keeping the roadway traffic in the lower deck.

Keywords: railway bridges, Metro trains, steel-concrete composite decks, masonry bridge, upgrading Luiz I bridge.

1. The Oporto Metro Network

The Metro project was developed as a public electric railway transportation system for the main Oporto city. It is an underground transportation system in the centre of the city and at ground surface in suburbs.

There are five lines with seven services as shown in table 1. The metro network crosses six municipalities of the metropolitan area with 68 stations distributed along 60 km of railway, 8 km of which under the ground.

Table 1 *Metro of Oporto: 60 km - 7 services*

Line	Stations
A	Senhor de Matosinhos – Gondomar
B	Póvoa de Varzim – Estádio do Dragão
C	Trofa – Estádio do Dragão
D	Parque Maia – Santo Ovídio
F	Belchior Robles – Casa da Música
G	Casa da Música – Santo Ovídio
-	Funicular dos Guindais
